PROFESSIONAL SUMMARY

ML Engineer with practical experience in building, training, and deploying ML models using Python (scikit-learn, TensorFlow basics) alongside advanced data analysis skills. Proficient in cleaning and analyzing large datasets, creating predictive models for business use cases, and automating reporting workflows with Excel and Python. Strong foundation in data preprocessing, feature engineering, and model evaluation. Committed to producing reliable, production-ready AI solutions and continuously expanding knowledge in low-resource ML applications and inclusive data practices.

WORK EXPERIENCE

ML Engineer Intern, *NITHUB – University of Lagos* 02/2026 – Present
Nigeria

- Contribute to real-world machine learning initiatives in a collaborative tech hub, owning tasks across model development, data preprocessing, feature engineering, and prototype integration.
- Build and experiment with predictive models using Python in Google Colab (scikit-learn, XGBoost, basic TensorFlow/PyTorch), with a focus on practical business and production-grade applications.
- Design and implement API-driven ML solutions using **FastAPI** for model serving and inference endpoints, enabling seamless integration with frontend and backend systems.
- Work extensively with **Retrieval-Augmented Generation (RAG)** pipelines, combining vector databases, embeddings, and LLM inference to enhance context-aware AI responses in real-world projects.
- Participate actively in code reviews, debugging sessions, deployment discussions, and API documentation, gaining end-to-end exposure to ML workflows from experimentation to production.
- Collaborate closely with mentors and cross-functional teams to address production-oriented challenges, including model scalability, latency optimization, and integration of external APIs.

Machine Learning Training Participant, *NITHUB – University of Lagos* 06/2025 – 12/2025
Nigeria

- Completed intensive ML training program covering mathematics for ML, model understanding, data analysis, fine-tuning techniques, and deployment best practices.
- Built multiple end-to-end projects in Google Colab, including data preprocessing, feature engineering, model training/evaluation, and basic deployment workflows.
- Gained hands-on experience with Python libraries (Pandas, NumPy, scikit-learn, XGBoost) and foundational deep learning concepts.
- Participated in collaborative exercises and workshops focused on real-world problem-solving and ethical AI considerations.
- Demonstrated consistent progress through project submissions and peer/technical feedback.

Data Analyst Intern, *GIIT Ikeja* 01/2023 – 05/2023
Nigeria

- Performed data analysis tasks using Excel and introductory Python tools, focusing on cleaning, organizing, and visualizing datasets for training and reporting purposes.
- Created structured summaries, charts, and basic reports from raw data to support decision-making and instructional materials.
- Assisted in preparing analytics-related documentation, gaining foundational skills in data handling and exploratory analysis.
- Supported team workflows by applying spreadsheet techniques to organize and summarize information efficiently.

EDUCATION

Bachelor of Science in Computer Science, *University of Nigeria, Nsukka* 10/2020 – 04/2025
Nigeria
Relevant Courses: Data Structures and Algorithms, Object-Oriented Programming, Database Systems, Artificial Intelligence, Probability and Statistics, Linear Algebra, Software Engineering, Computer Networks

SKILLS

Programming Languages

- Python
- SQL

Machine Learning Tools

- TensorFlow
- PyTorch.

Soft skills

- Problem Solving
- Communication.

Framework

- LangChain
- Pandas
- Numpy

Data Tools

- Excel
- Power BI

PROJECTS

Banking_Marketing_Analysis 07/2025 – 07/2025

- Curated and preprocessed a dataset of 50,000+ anonymized customer transaction records, including demographic, behavioral, and product usage features, using Python (Pandas, NumPy) and advanced Excel techniques.
- Built and fine-tuned multiple predictive models (XGBoost, Random Forest, K-Means clustering) to identify high-value customer segments and recommend tailored product offers, achieving 78–85% accuracy in segment prediction.

JobAI: AI-Powered Resume & Cover Letter Optimizer 03/2026

- Engineered a full-stack AI application using Streamlit and Groq to help Nigerian job seekers optimize resumes and generate tailored cover letters that beat Applicant Tracking Systems (ATS).
  - Utilized PDF text extraction , semantic similarity scoring (sentence-transformers embeddings), and large language model prompting (Groq Llama-3.3-70B) to compute ATS match scores, suggest Nigeria-relevant keywords, rewrite bullet points, and produce professional cover letters.
  - Contributed to reducing ATS rejection rates and improving job application success for users in competitive Nigerian sectors (banks, fintech, remote roles) by making optimization accessible, mobile-friendly, and optionally Pidgin-aware.
